Brainstorm – The Seven Rules

Name:

Date:

Version:

#1 Snooze criticism

You never know where a good idea will come from. Make sure everyone has a feeling that they are free to come up with their ideas and that they will allow others to build on them.

#2 Go for the wild ideas

Wild ideas can often give rise to creative inspiration. By thinking of ideas that are crazy or far-fetched, you can more easily relate to what you really want without assuming a lot of technical limitations.

#3 Build on other people's ideas

Staying positive and building on other people's ideas requires a lot of practice. In the conversation, you should constantly try to use "and" instead of "but", to force yourself to improve instead of criticizing.

#4 Stay focused on the topic

Try to keep the discussion focused, otherwise you will quickly go into a tangent that is not relevant to the core of your issue or design question.

#5 Have one conversation at a time

Your team is much more inclined to build on an idea and create a creative breakthrough if you are all fully paying attention to the one who is sharing a new idea.

#6 Be visual

In brainstorms, you write down post-its and put them on a wall or table. In the process, nothing explains an idea faster than drawing it. And, it doesn't matter that you're far from being a Rembrandt!

#7 Go for quantity

Go for as many new ideas as possible. In a good brainstorm, up to 100 ideas are often generated in 60 minutes.
